Plantation of hedge plant

Date: 18th July, 2026

Venue: St. Xavier's College Campus.

Time: 11:0 am

Objective

The main goal of this is to create a natural boundary in the college campus. By planting a living hedge instead of building concrete or metal walls, we establish a secure, eco-friendly perimeter that naturally guides foot traffic and enhances campus security.

Event Overview:

Hedge plants were planted on both the sides to entrance road to create a natural fence as it acts as a natural sponge for excess water and can help with soil drainage.

The previously planted hedges were pruned and planted.

The event was conducted in college campus under the guidance of Fr. Burno Toppo and members of green guardian club.

Outcome

Enhanced Aesthetics & Boundary: Successfully established a green, organized border along both sides of the main entrance road.

Environmental Benefits: Improved local soil drainage and water absorption capacity, promoting eco-friendly campus landscaping.

Campus Engagement: Fostered a sense of environmental responsibility and teamwork among students and faculty members who participated in planting and pruning activities.

Feedback

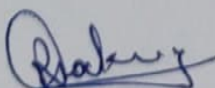

Students and club members expressed great enthusiasm for hands-on active participation in greening the campus.

Participants suggested scheduling regular maintenance drives (watering and pruning schedules) to ensure the healthy growth and longevity of the newly planted hedges.

Conclusion

The Plantation of Hedge Plant drive was a meaningful step toward building a sustainable and visually appealing campus environment. Replacing artificial barriers with green hedges not only strengthens campus security and layout guidance but also contributes positively to the local ecosystem. The initiative highlighted the power of collective student action under leadership, setting a positive precedent for future environmental projects on campus.
